## IH Systems Secures Funding To Manufacture Pharmacy Automation System

Winnipeg, MB- January 9, 2007- Intelligent Hospital Systems (IH Systems), a Winnipeg-based medical device company, announced today it has secured \$4 million in private funding, with a commitment for a further \$2 million in mezzanine debt. The funding will be used to build a current Good Manufacturing Practice (cGMP) facility for the manufacture of the company's RIVA (Robotic Intra Venous Automation) product - a self-contained unit for filling IV syringes and bags. The new 15,000 square foot facility will open in April of this year in the Tuxedo Business Park in Winnipeg, Manitoba.

Kevin McGarry, President and Chief Executive Officer of IH Systems, indicates the successful execution to date of RIVA's product development and sales plan was instrumental in securing the additional funding. "We are delighted by this affirmation of investor confidence in our company and, in particular, RIVA as our first product." McGarry says the offering was significantly over-subscribed, which he attributes to investor awareness of the demand for RIVA within the North American hospital pharmacy community. He continues, "This funding ensures we are well-capitalized to deliver the next phase of our product plan."

By the end of Q1 of 2007, IH Systems will complete the engineering verification and testing phases for RIVA, marking the company's transition from product development to product manufacture.
